

1 HTML tags on text arrangement, style, color. Design a page which looks like the text given below

To begin, we can change the

header size

and **color of letters** seen on the screen. The **font size** can be changed as well, and actually gives more choices.

We can also change the appearance of words on the screen. This shows some differing word types in a blocked quote.

Now is the *time* for all good **people** to **come** to the *aid* of their country.

That was also an example of a nested command.
